

Cat testing

Before we re-home any of our dogs, we assess their suitability to live with cats. GRWE always has a waiting list for greyhounds that are able to live with cats.

The assessment involves an initial introduction to a cat and an assessment of the greyhound's reactions. The assessment is fully supervised by a rehoming officer and very safe. The dog is muzzled and on a lead, and there is no physical contact between cat and dog!

If you think you and your (dog friendly) cat are able to help us assess our dogs for their suitability to live with cats then please do get in touch with the person shown under your local area on the volunteer page for more information.
